EXPLOIT3RS

THIS IS TO CERTIFY THAT:

Aliaksandr Dziaruha

having met all the course requirements and successfully passed the final examination, has completed the

Networking Fundamentals

This course delivers essential technical knowledge on how modern computer networks operate. It covers core networking concepts including the OSI model, TCP/IP, IP and MAC addressing, subnetting, and routing. The course also builds practical skills in analyzing network traffic, identifying communication protocols, and using tools such as Wireshark. It connects foundational networking topics to real-world cybersecurity applications—equipping learners to understand, monitor, and protect digital environments more effectively.
